

## Dishwashing.

Gaggenau's dishwashers do the washing-up in the best possible manner – efficiently, quietly, economically. And they're fast too. The Vario dishwashers take just 57 minutes to wash and dry a fully loaded machine. One of the things responsible for this exceptional performance is our innovative Zeolite technology. The silicate material absorbs moisture and releases heat in the process – something that the appliance utilises in several different ways. Depending on the option chosen, programme times can be shortened, energy can be saved or drying performance can be enhanced. Zeolite completely regenerates itself after each wash cycle and lasts as long as the machine itself, which means that this new technology is also a quantum leap in terms of energy balance.

### Vario dishwasher DF 461.

Maximum versatility thanks to the latest Zeolite technology – depending on the programme chosen, it helps to shorten programme times, save energy and enhance drying performance. Six dishwashing programmes can thus be combined with up to four options.

- **Frontage:** The fully integrated appliance is entirely concealed behind the furniture panel.

---

- **Dimensions:** 60 cm wide; 86.5 cm high.

---

- **Options:** Six dishwashing programmes can be combined with four different options:
  - **Power:** This option washes and dries a complete load in just 57 minutes.
  - **Intensive:** Washes heavily soiled items in the lower basket and sensitive items in the upper basket at the same time.
  - **Extra Dry:** Even gets plastic perfectly dry.
  - **Energy Save:** Ensures 15% less energy consumption while using just ten litres of water.

---

- **Lighting system:** Bright interior lighting makes things easy to find.

---

- **Flex Plus basket system:** Folding spines, foldable racks, glass holders and a dividable cutlery basket combine to ensure maximum flexibility with regard to the layout of the upper and lower baskets.

---

- **Glasscare Plus technology:** Protects sensitive glassware by preventing extreme temperature fluctuations. In addition, Zeolite technology enables gentle drying at low temperatures.

---

- **Fully extendable and smooth running baskets:** For convenient loading and emptying, even at the very back of the top basket.

---

- **Info-Light:** A tiny red light, which is projected on to the floor, signals that the dishwasher is running. Why? Because the appliance is so quiet and the control panel is deliberately not visible from the outside.

---

- **Rackmatic with three levels:** Even when fully loaded, the upper basket can be height-adjusted to three different levels. For maximum flexibility when loading.

---

- **Vario Flex drawer:** Special accessory for accommodating larger cutlery items, cooking utensils and espresso cups. This adds a practical third loading level to the basket system.

---

- **Special accessories:** Stainless steel or aluminium-handle, matching the 200 series ovens.

### Power dishwasher DF 240.

The "Power" option gives performance a decisive boost.

- Frontage: Fully integrated behind customised furniture panel.
- Dimensions: 60 cm wide; 81.5 cm high.
- Options: Four dishwashing programmes can be combined with two different options:
- Power: This option washes and dries a complete load in just 59 minutes.
- Intensive: Washes heavily soiled items in the lower basket and sensitive items in the upper basket at the same time.
- Glass care technology: Prevents large temperature fluctuations and compensates for varying levels of water hardness. Both factors are instrumental in preventing glasses from losing their sheen.
- Heat exchanger: Fresh water is heated up by residual water. The drying cycle doesn't use any electricity thus saving energy.
- Baking tray spray head: To clean large objects, the baking tray spray head is attached to the back wall instead of the top basket. It comes with every dishwasher model.
- Aqua sensor: Checks the cleanliness of the water after the pre-wash. If it's considered clean enough for the main cycle, the water will not be changed. This saves water.
- Info-Light: A tiny red light, which is projected on to the floor, signals that the dishwasher is running. Why? Because the appliance is so quiet and the control panel is deliberately not visible from the outside.
- Fully extendable and smooth running baskets: For convenient loading and emptying, even at the very back of the top basket.
- Rackmatic with three levels: Even when fully loaded, the upper basket can be height-adjusted to three different levels. For maximum flexibility when loading.
- Special accessory: Stainless steel or aluminium handle matching the 200 series ovens.
